algavis

Solution of filtered seaweeds cream

Features

The presence of alginate enhances the biostimulant function of the seaweed by acting as a carrier for the contained or combined elements. The high presence of carbohydrates, amino acids, and naturally occurring vitamins in the seaweed stimulates the plant's metabolism. It enhances both qualitative and quantitative yield by promoting better root development and vegetative growth, resistance to sudden temperature drops, increased hydration, improved fruit set, better utilization of fertilizers, larger and more colorful fruits, and higher sugar content. Repeated use of the product enhances the plant's ability to respond to stress induced by biotic and abiotic factors.

Fields of application

It can be used on fruit crops, vines, vegetables, ornamentals, nurseries, and golf courses, and it is compatible with most common pesticides and fertilizers available on the market. Avoid mixing it with products containing glycols.

COMPOSITION	Organic carbon (C) of biological origin: 6% Mannitol: 8 g/l
HAZARD CLASSIFICATION	The product is not classified as hazardous according to Regulation (EC) 1272/2008 (CLP)
FORMULATION	Fluid solution
PACKAGING	5 kg tank - Box of 4 units
