neem soil®

Nitrogenous organic fertilizer

Features

It consists of the solid part obtained from the cold pressing of Neem seeds (*Azadirachta indica*). The presence of various limonoids determines an action that disrupts the development of nematodes and fungal pathogens in the soil. It is an excellent fertilizer with an effective action in reducing nitrogen leaching and an important role in enriching nutrients and organic matter. It can be in powder, granular, or pellet form. The latter two formulations are ideal for mechanical distribution. It is completely natural, containing no solvents or other harmful components. It is permitted in organic farming.

Fields of application

It can be used in all crops, particularly on soils low in organic matter and heavily exploited by intensive crops (vegetables, fruit crops). For field or greenhouse vegetables: 400-600 kg/ha localized on the row; 700-1,000 kg/ha for open-field crops. For fruit crops: 800-1,000 kg/ha on the row; 500-750 g per plant.

COMPOSITION	Nitrogen (N): 3% Phosphorus (P): 0,6-1% Potassium (K): 1,2–1,6% Total amount of organic matter: min 70%
HAZARD CLASSIFICATION	The product is not classified as hazardous according to Regulation (EC) 1272/2008 (CLP)
FORMULATION	Extruded
PACKAGING	20 kg sack - Pallet with 40 sacks
