megamicro

Fertilizer with trace elements boron, copper, iron, manganese, molybdenum and zinc

Features

A fluid mixture with rapid absorption, based on chelated trace elements (boron, copper, iron, manganese, molybdenum and zinc), specifically designed to prevent and treat nutritional deficiencies. Particularly suitable for fruit and vegetable cultivation, but widely used in floriculture as well, for foliar fertilization and fertigation. It makes treated plants more resistant to climatic adversities, parasitic diseases, and water scarcity. It improves lignification of young parts, also promoting an increase in the root system.

Fields of application

Suitable for all tree, extensive vegetable, and flower crops. Recommended for 2-3 applications, with doses of 5-10 kg/ha for fertigation and 100-250 g/hl for foliar application.

COMPOSITION

Water soluble Boron (B): 0,2%
Water soluble Copper (Cu): 0,3%
EDTA chelated Copper (Cu): 0,3%
Water soluble Iron (Fe): 1,5%
EDTA chelated Iron (Fe): 1,5%
Water soluble Manganese (Mn): 0,4%
EDTA chelated Manganese (Mn): 0,4%
Water soluble Molybdenum (Mo): 0,02%
Water soluble Zinc (Zn): 0,5 %
EDTA chelated Zinc (Zn): 0,5%

HAZARD CLASSIFICATION

Danger
Repr. 1B
H360FD May damage fertility or the unborn child
Under Regulation (EC) No 1272/2008 (CLP), it is recommended to consult the hazards associated with the product in the safety data sheet and to always follow the information provided on the label

FORMULATION

Liquid mixture

PACKAGING

1 kg bottle
- Box of 12 pieces
