Tutaroll black

Trap for the capture of Tuta absoluta

Features

Trap for the control of *Tuta absoluta* (tomato borer) in greenhouses, through the mass trapping of the insect. It consists of a plastic roll covered with entomological glue. The large glued surface, the black color of the roll (chromotropic action) and the presence of a specific *Tuta absoluta* pheromone attractant on the glue, allow to capture a very high number of adults, drastically reducing infections in the greenhouse.

Fields of application

Mass trapping of *Tuta absoluta.* It must be positioned along the entire perimeter and near the entrance doors of the greenhouse. In addition, it can also be used between the crop rows. The pheromone present on the glue is activated when the roll is stretched inside the greenhouse. It remains efficient on average 45-60 days after assembly, in the absence of dust or washout agents.

CONTENT	30 cm x 100 m roll with pheromone
HAZARD CLASSIFICATION	The product is not classified as hazardous according to Regulation (EC) 1272/2008 (CLP)
PACKAGING	Box of 6 pcs
