

Pheromones Plus (5 mg charge) and kairomones are available: they are recommended for the monitoring on crops under mating disruption.

HOW TO USE:

SUPER CARPO differs from the other traps because of its particular shape, specifically studied for the monitoring of *Carpocapsa pomonella*. It is a classical "Delta" trap, with narrowed openings which allow a more defined pheromone flow: this leads to a more efficient and precise catching. Placement and instructions for use are similar to the SUPER TRACK ALA ones.

HOW TO INSTALL:

- Open the trap by following the indicated marks.
- Insert the panel with the pheromone placed in the middle and close the side bands.
- Hang within the vegetation by using the plastic wire.

Packaging: 34 units/ box.

Content: 1 trap, 3 sticky panels, 3 pheromone dispensers, 1 plastic wire, 1 spatula to remove insects
